

"Development of an Intelligent Mobile Platform for Online Trading on a Single Kazakhstan Server Using Information Technology"

2022–2024. As part of the "Young Scientist" project in 2023, ZhTN AR 15473405

Project Manager: PhD student **Zhandos Kaldybayuly Turdaliev**.

Grant Amount: **18 945 430 tenge**.

Project Benefits: Defining an online trading platform in a specific system; connecting the online platform to an additional trend-oriented user; percentage-based payment system; providing information about the mobile platform for online trading.

Status/Result:

- Implementation of a hybrid website version on the base platform and testing with Kazakhstani products loaded onto the platform to identify functional errors.
- This system implements an online banking system for trading, connected to the global SWIFT transfer and payment system.
- Formation of an independent financial system by determining the basic percentage size of the commission of the global transfer and payment system SWIFT.
