

A meeting of the “Fundamentals of Artificial Intelligence” club was held at the Department of Mathematics and Informatics

In November 2025, the Department of Mathematics and Informatics of Shymkent University hosted a regular meeting of the “Fundamentals of Artificial Intelligence” club.

The event was organized with the support of the Council of Young Scientists. The main topic of the meeting was the project “Solar-Powered Robomobile.” Club members and students discussed current trends in artificial intelligence technologies and the possibilities of creating environmentally efficient robotic systems using solar energy.

During the meeting, students presented their scientific projects and shared their views on the effective use of solar power.

The event aimed to develop students’ scientific thinking, innovative abilities, and research skills.

At the end of the session, the department’s faculty and students emphasized the importance of improving artificial intelligence technologies in a practical context. Under the motto “Artificial Intelligence is the key to the future, and our students are the pioneers of that future,” the club concluded its meeting.
